

## INNOVATION & TECHNOLOGY

### ACTION PLAN

### TARGET

Elaboration of the first  
Research and Technology Master Plan

Outline the technology innovation strategy and define key technological platforms and the lines of action to support the effectiveness of the strategy itself.

Technological platforms

Identify the ten technological platforms for long term development, diversified along all business segments and focused on the reduction of the environmental impact of operations.

“Along with Petroleum” Program

Achieve global excellence in the renewable energy sources sector – particularly solar energy and biomass

Blue Sky Fund

Finance highly innovative research projects with the purpose to produce technological breakthroughs in the core business and in the field of environmental sustainability.

Redefining the mission of  
Eni’s Technological Development  
Research Centers

Redefine the mission of Eni’s Technological Development Research Centers by means of a clear allocation of tasks to alternative energy sources (Eni Donegani Institute, Novara), core business Oil & Gas (S. Donato Milanese), environmental protection.

New approach to Intellectual Property  
Management and Development

Acknowledge Intellectual Property Management and Development as a high-value asset for the company.

New policy of Strategic Alliances and  
Scientific collaborations with  
Universities and Centers of Excellence  
around the world

Achieve faster technological breakthroughs and increase the technical and scientific know-how and skills of Eni’s researchers.

Eni Award

Acknowledge cutting edge scientific research in the field of new hydrocarbon frontiers, alternative and non conventional energies, environment protection.
