

Parking Reminder

The system is designed to help locate a parked vehicle.

Operation of the system depends on the availability of a GPS signal in the parking area.

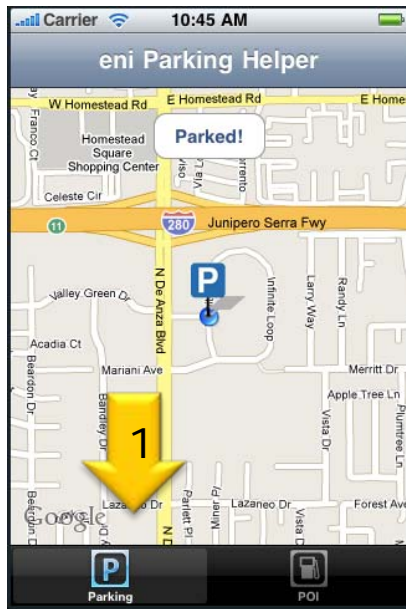

The user activates the service which memorises the vehicle's GPS coordinates.

On returning to the parking area, the application then provides (textually and visually) directions to the parked vehicle.

Parking Reminder – How it works

- The application can be used to remind the user where he has parked his vehicle. Access for this function is made by selecting the Parking section from the Main Menu.
- The parked position is saved by pressing the “Parked” button.

Installation

- To download the application, follow the normal procedure on Apple's App Store.
