

Service station locator

The system has been designed to locate the nearest eni service station on the users' route based on GPS data.

The user activates the service which memorises the vehicle's GPS coordinates, the application then provides (textually and visually) directions to the nearest service station.

Service station locator – How it works

1. The application can be used to locate the nearest eni service station or a point of interest indicated by eni by accessing the POI section directly from the Main Menu.
2. The application displays the nearest points of interest and provides the most significant details, such as the distance.
3. By selecting a point of interest and using the button on the right, the application provides the necessary directions.

Locate a service station – How it works

4. To reach the selected point, follow the indications provided by the application.

The green markers indicate turns, the box at the top shows the indications to follow until the next turning. Indications change automatically when the user approaches the turning.

To stop the navigation, press the stop button or launch navigation to a new eni point.

If the user moves away from the suggested route, the application automatically recalculates an alternative route.

Installation

- To download the application, follow the normal procedure on Apple's App Store.
